INSTALLATION INFORMATION EMG MODEL: **B351 KILL SWITCH**

INSTALLATION NOTES:

The B351 Kill switch does exactly what it says, it "kills" the output signal of the guitar.
The switch is a "Momentary" spring loaded switch that kills the signal in the down position.
The diagram below shows how this is possible.

Connecting the the Kill Switch;

Refer to the Diagram
The Kill switch is usually the last thing in the signal chain.
The diagram shows a typical installation with the signal coming from the master tone control.
It could just as easily coming from a master volume, or perhaps the Buss board.
The input and output connectors can be swapped.
Be sure the wire colors are installed as shown (Black/White)
