

R10S

Dynamic Microphone

Samson's R10S Dynamic Microphone brings great sound and versatility to a variety of recording and recreational audio applications. Perfect for karaoke, multimedia, portable recording and more, the R10S is engineered to the finest detail to provide any performance with exceptional sound reproduction and accuracy.

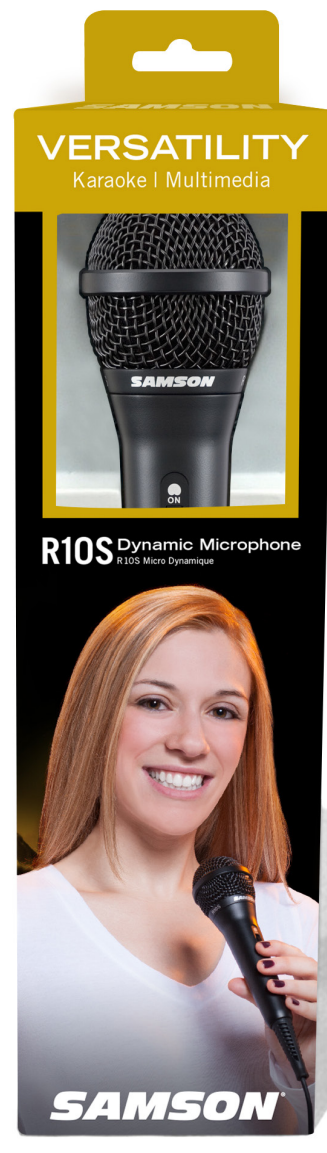

The heart of the R10S's performance stems from its neodymium, multi-axis shock mounted mic element. Offering high gain output and a low impedance design, the capsule also features a cardioid pickup pattern. This enables the R10S to pick up all the nuances of any performance with exceptional clarity and detail, while reducing feedback and unwanted signals.

The R10S offers a frequency response of 80Hz–12kHz, which is ideal for vocal and multimedia applications. Also equipped to withstand high sound pressure levels, the mic produces vocals that sound huge and crystal clear. This makes the R10S a versatile tool in portable recording applications as well.

The R10S features a convenient On/Off switch, as well as a hardwired 1/8" mic cable. For added versatility, a 1/8" to 1/4" cable adapter and desktop stand are also included.
